

Continuing education in the battery sector starts at the University of Oulu in Autumn 2023

Are you employed in the battery industry or in its value chain? Come strengthen your knowhow through continuing education in the battery sector, free of charge. The University of Oulu will offer continuing education in the battery sector to industry players during autumn 2023 and spring 2024. The aim is to promote the development and international competitiveness of the battery sector in a sustainable way.

Study modules

The training consists of four modules: :

- **Commercialisation and business**
- **Mineral exploration and processing**
- **Battery chemicals and production**
- **Robotics and automatisisation**

Each module consists of 2-3 courses. The courses are independent entities – you can pick the courses that best suit your needs or complete the entire module.

Target group

The training is aimed at people working in the battery industry or its value chain. However, you can participate even if you are not yet working in the sector - an interest in working in the field and previous study or work experience in engineering or science is sufficient. The training courses are designed to be completed alongside work, and learning through practical projects allows you to put what you have learned straight into practice.

More information

Timing of training: Autumn 2023 – spring 2024

Method: Free training online, largely independent of time and place

Teaching language: Finnish and English

For more information contact: Emmi Alakärppä, emmi.alakarppa@oulu.fi
